

Andy Wu

(925) 683-1390 | andyw98@berkeley.edu | linkedin.com/in/awu1 | github.com/andy98w | andy-wu.com

EDUCATION

University of California, Berkeley

Major: Computer Science

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, SQL, C++, Go

Backend/Data/AI: Spring Boot, FastAPI, PostgreSQL, Kafka, Redis, OpenSearch, RAG, MCP, LangGraph

Cloud & Infrastructure: Kubernetes, Terraform, Docker, Helm, AWS, OCI, Prometheus, Grafana, API Gateway

Certifications: Certified Kubernetes Admin; OCI Certified Architect Associate/Developer Professional

WORK EXPERIENCE

Oracle | Software Engineer, OCI — Redwood Shores, CA

Sept 2024 - Present

- Owned backend migration of a legacy sales application from WebLogic to Spring Boot microservices on Kubernetes, redesigning ETL/search architecture and migrating Elasticsearch workloads to OpenSearch.
 - Built a bounded multithreaded Spring Boot search service across 5.6M business leads, 5M company profiles, and 20K products, delivering sub-200 ms parameterized queries.
 - Led migration from broad node-level OCI permissions to workload-scoped IAM by upgrading OKE clusters and refactoring access policies to enforce least privilege and reduce credential blast radius.
 - Operated shared OKE infrastructure across cluster upgrades, scaling, RBAC, service discovery, ingress, NetworkPolicy, CNI networking, and Prometheus/Grafana observability.
 - Designed a schema-driven Terraform generation framework covering 967 OCI resource types, grounding generated modules in provider schemas and validating dependencies, naming conventions, and tags.
 - Built and deployed the serving and orchestration layer for an internal sales RAG assistant on OKE, including PDF ingestion and vector retrieval supporting ~5,000 daily queries; received Oracle's Platinum Award.
-

PROJECTS

KubeVista | Sole Engineer - Go, React, Kubernetes, AWS

August 2026 - Present

- Architected a production-grade Kubernetes operations platform on AWS EKS with a three-AZ Terraform network, private managed nodes, Pod Identity, encrypted storage, and Cognito-protected HTTPS delivery through Route 53, ACM, and ALB.
- Operated 12 application and platform services through Argo CD and Helm, integrating Prometheus, Grafana, Loki, Tempo, OpenTelemetry, External Secrets, ExternalDNS, autoscaling, disruption budgets, and least-privilege RBAC.
- Built a keyless GitHub OIDC-to-ECR delivery pipeline with signed immutable images, SBOM/SLSA attestations, and vulnerability scanning; demonstrated 100% request success during controlled failures.

Illuma | Founder & Sole Engineer - Next.js, FastAPI, PostgreSQL, Python

June 2026 - Present

- Founded and engineered an AI admissions platform with a multi-agent orchestration system coordinating 39 typed tools with shared state and deterministic validation across 79K applicant outcomes.
- Trained and calibrated an XGBoost admissions-probability model across 130 universities, achieving a 0.108 Brier score on held-out validation.
- Built a nine-dimension essay evaluation system using GPT and Gemini with an ML calibration layer and deterministic validation/repair checks.
- Grew the product to 5,000+ users and \$10K+ revenue through content strategy, generating 4M+ views across TikTok and Instagram.
