SKILLS AND CERTIFICATIONS

Languages: Java, Python, TypeScript, SQL, C++, Go

Backend/Data/AI: Spring Boot, FastAPI, PostgreSQL, Kafka, Redis, OpenSearch, RAG, MCP, LangGraph

Cloud & Infrastructure: Kubernetes, Terraform, Docker, Helm, AWS, OCI, Prometheus, Grafana, API Gateway

Certifications: Certified Kubernetes Admin; OCI Certified Architect Associate/Developer Professional

WORK EXPERIENCE

Oracle | *Software Engineer, OCI — Redwood Shores, CA* Sept 2024 - Present

- Owned migration of a legacy sales application from WebLogic to Spring Boot microservices on Kubernetes, redesigning ETL/search architecture and migrating Elasticsearch workloads to OpenSearch; reduced full ETL runtime by 75%
 - Built a bounded multithreaded Spring Boot search service across 5.6M business leads, 5M company profiles, and 20K products, delivering sub-200 ms parameterized queries.
 - Led migration from broad node-level OCI permissions to workload-scoped IAM by upgrading OKE clusters and refactoring access policies to enforce least privilege and reduce credential blast radius.
 - Coordinated with application owners across the team to onboard services onto a new Kubernetes cluster, configuring workload access, ingress, service discovery, network policies, IAM, cloud secrets, RBAC
 - Designed a schema-driven Terraform generation framework covering 967 OCI resource types, grounding generated modules in provider schemas and validating dependencies, naming conventions, and tags.
 - Built and deployed the serving and orchestration layer for an internal sales RAG assistant on OKE, including PDF ingestion and vector retrieval supporting ~5,000 daily queries.
 - Received Oracle's **Gold Award** for **outstanding performers** in team-level initiatives and deliverables
-

PROJECTS

KubeVista | *Sole Engineer - Go, React, Kubernetes, AWS* August 2026 - Present

- Provisioned a three-AZ AWS EKS lab with private worker nodes, Terraform-managed networking, and Pod Identity; implemented GitOps delivery through 12 Argo CD applications and centralized metrics, logs, and distributed tracing.
- Built a Go and React operations console with guarded Deployment restart, scaling, and rollback workflows; enforced server-side dry runs, expiring single-use plans, namespace and replica limits, optimistic concurrency checks, and audit receipts.
- Validated resilience under continuous Fortio traffic during an API pod replacement: all 896 requests returned HTTP 200, and the replacement pod became Ready within two seconds.

Illuma | *Founder & Sole Engineer - Next.js, FastAPI, PostgreSQL, Python* June 2026 - Present

- Founded and built an AI college-admissions platform with 39 typed tools for college planning
 - Diagnosed synchronous database writes blocking AI streaming and implemented a coalescing background writer with terminal-state safeguards; reduced progress-callback overhead from 318 seconds to 23 milliseconds in a staging comparison.
 - Trained and calibrated an XGBoost admissions-probability model across 130 universities, achieving a 0.108 Brier score on held-out validation.
 - Grew the product to 5,000+ users and \$10K+ revenue, and generated 4M+ organic social media views.
